geodorf GAMS

Welcome to GeoDorf Gams

The GeoVillage Gams wishes you great fun exploring the geology of our region. Find out about the geological secrets of Gams on our GeoTrail, learn more about the formation of our landscape in the interactive exhibition GeoRama or experience our geological features in the Noth Gorge and in the Kraus cave. At the end of the day, our outdoor swimming pool is worth a visit if you'd like to cool off. Visit our team at the new Information Centre next to the GeoWorkshop. Our team is more than happy to help you plan your trip.

Hiking Geology:

Tramp the GeoPfad and discover the Noth Gorge

The GeoPfad ("path") is a mostly easy walk which takes you to 15 things to see and learn on 3 kilometres. Starting at the GeoWorkshop, the path follows the Gams stream right to the Noth Gorge. A 700-metre stairway leads you through the gorge dug into the landscape by the rushing stream. Connected by single steps and bridges, the path keeps rising and falling. Eventually, the Noth Gorge takes its visitors up a steep slope and on to the only Grinding Mill in Styria. Turn around here to find your way back along the old Noth way until you reach the starting point, the GeoWorkshop.

Gams GeoVillage is located in the heart of UNESCO Global Geopark Styrian Eisenwurzten. The surface of the Nature and Geopark amounts to 586 km² and encompasses the communities of Altenmarkt, Landl, St. Gallen and Wildalpen. A UNESCO Geopark is by definition "a delimited area in which the landscapes and natural occurrence of rocks are of international scientific importance."
